KINETIC ENERGIES OF THE WALL IN ANISOTROPIC NICKEL-IRON LAYERS. [1963] [21]p. 20 refs.
Order from SLA \$2.60 63-14462

Trans. of German language unpublished manuscript [1962].

DESCRIPTIONS: *Iron compounds, *Nickel compounds, Anisotropy, Walls, Reaction kinetics, Exchange reactions, Energy, *Paramagnetism.

(80/20) Nickel-iron layers of 300 to 800 Å thickness were annealed to various bases at temperatures between 20° and 400°C. For all layers, there was a uniform relationship between layer thickness, anisotropic field strengths and kinetic field strengths of the wall for re-magnetization in the easy and hard directions.

Theoretical considerations were made with respect to the effect of thickness, magnetization, exchange const. (Physics, Solid State, TF, v. 10, no. 9) (over)
